For chemical substances and preparations according 1907/2006/EG, Article 31

Trade name: Tungsten Electrode WP, WR2, WLa10, WLa15, WLa20, WCe 20, WZr3, WZr8 Last revision: 2013-02-28 Printed Date: 2015-08-21

1. Identification of substance

Product details

Trade name: Tungsten Electrode WP, WR2, WLa10, WLa15, WLa20,

WCe 20, WZr3,WZr8

Application of the substance / the

Preparation: Non-melting electrode for TIG welding process; electrode for light technology;

electrode for Plasma cutting, Plasma welding, Plasma spraying; Emission cathode

for electronic tubes.

Manufacturer/Supplier: Alexander Binzel Schweißtechnik GmbH & Co. KG

Postfach 10 01 53 / D- 35331 Gießen

Phone: + 49 (0) 6408/59-0

Responded Person: Technical documentation

Phone: + 49 (0) 6408/59-0

e-Mail: technischedokumentation@binzel-abicor.com

void

Emergency Call: Poison Control Center Mainz – 24 hour emergency service

Tel.: + 49 (0) 6131 19240

2. Hazards identification

Hazard designation:

Information pertaining to particular dangers for man and environment:

The product does not have to be labelled due to the calculation procedure of the "General

classification guideline for preparations of the EU" in the latest valid version.

Classification system The classification is in line with current EC lists. It is expanded, however, by information

from technical literature and by information provided by supplier companies.

GHS label elements: void

3. Composition/information on ingredients

Chemical characterization

Description: Mixture of the substances listed below with harmless additions.

Ingredients:		
CAS: 7440-33-7	Tungsten, W	50-100%
EINECS: 231-143-9	_	
CAS: 1312-81-8	Lanthanum(III)-oxide	0-4%
EINECS: 215-200-5		
CAS: 1306-38-3	Cerium(IV)-oxide	0-4%
EINECS: 215-150-4		
CAS: 1314-23-4	Zircon oxide	0-4%
EINECS: 215-227-2		
CAS: 1314-36-9	Yttriumoxid	0-4%
EINECS: 215-233-5		

4. First aid measures

General information: No special measures required.

Instantly remove any clothing soiled by the product.

After inhalation: Supply fresh air; consult doctor in case of symptoms.

Provide ventilation when person is not breathing or is breathing inadequately.

After skin contact: The product is not skin irritating

After eye contact: Rinse opened eye for several minutes under running water. Then consult doctor.

After swallowing: Rinse out mouth and then drink plenty of water.

Information for doctor

Treatment: If swallowed or in case of vomiting, danger of entering the lungs Subsequent observation

for pneumonia and pulmonary oedema

D0006283 EN 1 / 7 Version c

For chemical substances and preparations according 1907/2006/EG, Article 31

Trade name: Tungsten Electrode WP, WR2, WLa10, WLa15, WLa20, WCe 20, WZr3, WZr8 Last revision: 2013-02-28 Printed Date: 2015-08-21

5. Fire fighting measures

General information: The metal is in its solid form non-combustible.

Suitable extinguishing agents: Water, water jet, ABC dry powder or Class D dry powder.

For safety reasons unsuitable

extinguishing agents: -

Special hazards caused by the material, its products of combustion or flue gases:

Main products of combustion
Tungsten trioxide WO₃ (CAS 1314-35-8)
Protective equipment:
Wear self-contained breathing apparatus.

Additional information Cool endangered containers with water spray jet. Dispose of fire debris and contaminated

fire fighting water in accordance with official regulations.

6. Accidental release measures

Person-related safety precautions: Wear protective equipment. Keep unprotected persons away.

Ensure adequate ventilation Keep away from ignition sources

Use breathing protection against the effects of fumes/dust/aerosol.

Wear protective clothing.

Measures for environmental protection:

Do not allow product to reach sewage system or water bodies.

Prevent emission to the environment, if at all possible. Dispose waste, dust collection filter and container in a secured manner and according to the valid national regulations.

Retain and dispose impurified water from cleaning and grinding. Send for recovery or disposal in suitable containers. Dispose of the material collected

according to regulations. See section 13 for further information.

Additional information: See section 13 for information on disposal.

7. Handling and storage

Measures for cleaning/collecting:

Handling: Prevent incorporation of particulates during processing by using suitable extractions resp.

inhalation protection with particulate collector P2 or P3, P3 is recommended, identification

colour: white.

Prevent dust formation

Information for safe handling:

Information about protection against

explosions and fires:

see part 15

Storage: see part 15

Requirements to be met by storerooms and containers: Information about storage in one

common storage facility: Further information about storage

conditions:

Recommended storage temperature:

Recommended storage temperature: Certain application:

No special requirements.

Store away from foodstuffs.

see part 15.

perature: +5°C / +30 °C

This product is designed to be used as a non-melting electrode for TIG welding process. Dusts and vapour which are created during the process are to be extracted by corresponding devices by using filters or gas washers. Valid national regulations (e.g. StrlSchV, regulation 96/29/EAEC of the council) are to be met.

For chemical substances and preparations according 1907/2006/EG, Article 31

Trade name: Tungsten Electrode WP, WR2, WLa10, WLa15, WLa20, WCe 20, WZr3, WZr8 Last revision: 2013-02-28 Printed Date: 2015-08-21

8. Exposure controls and personal protection

Additional information about

design of technical systems: No further data; see part 7.

Components with critical v	alues that require monitoring at the workplace:		
7440-33-7 Tungsten	· · · · · · · · · · · · · · · · · · ·

1314-23-4 Zircon oxide			
MAK	1E mg/ m³		
(TRGS 900 – Germany)	1(1)		

Additional information: The lists that were valid during the compilation were used as basis.

Personal protective equipment: General protective and hygienic

measures: Do not eat, drink, smoke or snuff while working; hygienic working conditions, e.g. washing

your hands.

Use skin protection cream for preventive skin protection.

Breathing equipment: Extraction, particulate filtering mask (protection class P2) recommended at occurrence of

dusts/aerosols. Protection class and type of mask are to be adapted to the actual dust

loading, especially for cleaning and maintenance works.

Protection of hands:

The protective gloves to be used have to comply with the specifications of the EU regulation 89/686/EWG. For full-contact and arc welding, protective gloves from KCL part no. 590 are

suitable for example. These protective gloves comply with class 2 of EN 61482-1-1 "Live working - Protective clothing against the thermal hazards of an electric arc" and class 00 of EN 60903. This recommendation only applies for this product, delivered by us and for the use indicated by us. Please contact the supplier of CE-approved gloves in case of fragmentation or mixing with other substances (for example contact: KCL GmbH, D-36124 Eichenzell, phone ++49 (0) 6659 87300, fax ++49 (0) 6659 87155, e-mail vertrieb@kcl.de).

0

Protective gloves

Eye protection:

Tightly sealed safety glasses.
Gauze goggles recommended.

Body protection: Exposition environment: Protective clothing (long trousers, long sleeve shirt); avoid uncovered skin.

Residual substrates, deposits and contaminated filters are to be deposited according to the

valid national regulations (e.g. radiation protection regulation)

For chemical substances and preparations according 1907/2006/EG, Article 31

9. Physical and chemical properties:

General Information					
Form:	Solid				
Colour:	metallic grey				
Smell:	odourless				
Change in condition					
Melting point/Melting range:	3.680K				
Boiling point/Boiling range:	5.828K				
Flash point:	not applicable				
self-in flammability:	Product is not self igniting.				
Danger of explosion:	Product is not explosive.				
Oxidizing properties:	not applicable				
Vapour pressure at 20°C (mm Hg):	0 hPa				
Density at 20°C	WP 19,25 g/cm ³				
	WR2 18,62 g/cm ³				
	WLa 10 18,84 g/cm ³				
	WLa 15 18,66 g/cm ³				
	WLa 20 18,49 g/cm ³				
	WCe 20 18,53 g/cm ³				
	WZr 3 19,06 g/cm ³				
	WZr 8 18,83 g/cm ³				
Electrical conductivity	18,20 m/Ωmm ²				
Change of state					
Solubility in / miscibility with water:	insoluble				
Organic solvents:	0,0 %				
	insoluble in grease				
	high resistant against acids; slowly soluble in HNO₃ + HF				
	soluble in alkaline oxidation melts				
Solids content:	100%				

10. Stability and reactivity

Thermal decomposition /

conditions to be avoided:

No decomposition if used according to specifications.

Stability:

Product is stable under standard conditions. No decomposition if used according to

specifications.

Conditions to be avoided:

Oxidation at the presence of oxygen and increased temperatures (> 600°C), sublimation

(tungsten trioxide WO₃, CAS 1314-35-8) from 977°C and up.

Substances to be avoided:

Contact with strong acids and/or base; or with halogens (fluorine, chlorine, bromine, iodine

and their compounds); or with oxidizing agents (e.g. perchlorates, peroxides,

permanganates, chlorates, nitrates, nitrites, chromates); or with alkaline-/alkaline earth metals (e.g. lithium, sodium, potassium, magnesium, calcium) can cause extreme reactions (danger of exothermic reaction, danger of inflammable gas formation, formation of noxious /

toxic materials / gases) is to be prevented.

Dangerous products of composition:

Oxidation produces oxides of the product which can evaporate (tungsten trioxide WO₃,

CAS 1314-35-8) or are released.

For chemical substances and preparations according 1907/2006/EG, Article 31

Trade name: Tungsten Electrode WP, WR2, WLa10, WLa15, WLa20, WCe 20, WZr3, WZr8 Last revision: 2013-02-28 Printed Date: 2015-08-21

11. Toxicological information

Acute toxicity: The product does not show any acute oral, dermal or respiratory toxicity.

W LD₅₀ oral, rat: >2000 mg/kg LD₅₀ dermal, rat: >2000 mg/kg

LC₅₀ respiratory, rat: >5,4 mg/l, 4h exposition

La₂O₃ Epidemiologically assured information concerning work-related diseases caused by

lanthanoids resp. especially La2O3 are not available.

LD₅₀ oral, rat: > 5 g/kg

Ce₂O₃ Details of the substance concerning its acute effect, especially of Ce₂O₃ are mostly not available. However, all tested organic CER-compounds, also the

soluble CER(III)-salts, have shown slight acute toxicity when taken in orally. Y_2O_3 In an experiment with rodents acute toxicity (hastened respiration) could be

detected after 4-hour inhalation of approx. 32 mg/m³ and up.

LD₅₀ oral, rat: > 5 g/kg

ZrO₂ Quantitative data are not available. After inhalation of dust: Neurological irritation

on respiratory tract. Hazardous risks are considered to be minor.

Chronic toxicity: Findings after intratracheal application of 50 mg T -dust/week for three weeks to guinea pigs led to the

estimation that the material is relatively inert. Nevertheless, a minor effect to the lung tissue (interstitial cellular proliferation) was detectable. T.-dust was added to the diet of very young rats in concentrations of 2; 5 or 10 % for 70 days. It caused a 15% reduction of the body weight gain for the female rats but

not for the male rats.

Primary irritant effect:

on the skin:
No irritant effect for making a classification.
No irritant effect for making a classification.
Sensitization:
No sensitizing effect known.

Additional toxicological

information:

12. Ecological information:

General information: Water hazard class: non-hazardous for water WO_4^{2-}

Ecotoxicity: Amphibians: LC50:2.9 mg/L (toad, Gastrophryne carolinensis, 7d) fishes: LC50:15.6 mg/L (rainbow

trout, Oncorhynchus mykiss, 28d) Microbial degredation: Not applicable.

Mobility: Tungsten compounds are found in soil resp. waters as wolframate (e.g. - 24WO) and other

polyanions. There are no existing reports about organic tungsten complexes. Absorption coefficient for

tungsten increases according to declining pH-value (pH=5:100-50,000; pH=6.5:10-6,000;

pH=8-9:5-90). According to these values there is little up to no mobility of tungsten compounds in soil and waters. In the natural environment tungsten compounds in form of ions or insoluble solid substances are found and therefore volatilization of soils and waters does not mean any significant environmental impact. Most tungsten compounds excell by low steam pressures at 25°C.

environmental impact. Most tungsten compounds excel by low steam pressures at 25°C.

Persistence and degradability:

Biodegradability: Not applicable.

A biotic degradability: Tungsten has various oxidation states (0, 2+, 3+, 4+, 5+, 6+), of which 6+ is the most stable one, the

others are rather instable. In combination with one or several elements, like for example oxygen, tungsten appears as ion. Tungsten compounds are found in waters in form of wolframate

(e.g. – WO_4^{2-}) and other polyanions. There are no existing reports about organic tungsten complexes. Divalent tungsten only exists as halogen compound. Tungsten has a strong tendency to form a

complex (e.g. creating heteropoly acids with oxides of phosphor, arsenic, vanadium, silicon and

others). Tungsten forms a series of oxohalogenides (e.g. WOCl₄).

Bioaccumulation potential: No data available.

Additional information: Water hazard class: Non-hazardous for water (WHC according to VwVwS of 17. May 1999)
